

Pin - Pallet

4-way forkliftable pin pallets stacked in knockdown configuration for return shipping.

■ **Multi-Function** –

will accept an assortment of parts. A unique hole pattern means each part is secured by pins to within 1/8" of the edge of each side.

■ **Stackable** – both loaded and unloaded. A positive locking mechanism keeps parts and pallets in the air instead of on the floor. Removable posts allow pallets to be shipped knocked down.

■ **Value** – one pin-pallet can replace four containers. The result is better utilization and fewer containers required.

■ **Ergonomics** – parts can be slid straight off the side. People do not have to stoop to pick parts out of a container.

Large (70" x 53") pin pallets in knockdown configuration. Runners welded to top surface allow heavy parts to be loaded and unloaded with a forklift. In addition, the entire pin-pallet is forkliftable from each direction.

We'll use our unique design to manufacture pin pallets in the size that is optimal for your operation. Contact us at 800-795-0551 or visit us on our web site.
